COMMENCEMENT OF DRILLING PROGRAMME - MOLYBDENUM AND GOLD

Zamia Gold Mines Limited (ASX: ZGM) is pleased to announce that it has commenced a drilling programme at its Anthony molybdenum prospect in central Queensland. The programme is focussed on the high grade zone of the deposit.

The plan is to drill an initial 12 holes to 300m depth. These will be reverse circulation (RC) holes with diamond cored tails. After receipt of assays, a recognised resource consultant will compile a resource estimate to JORC standard. Samples will also be despatched for preliminary metallurgical flotation tests to determine the likely molybdenite [MoS₂] recovery.

In addition, as part of the current programme, the Company plans to carry out initial RC drilling on two of its gold targets, Frankfield Hill and Matilda.

Further details of the Company's projects can be found in the Annual Report and in the latest Quarterly Report. An update will be provided at the Annual General Meeting on 26 November.
