### COMMENCEMENT OF DRILLING ON GOLD TARGETS

Zamia Gold Mines Limited (ASX: ZGM) has commenced a programme of drilling to test gold targets in its exploration tenements in the Clermont district of Central Queensland.

Soil geochemical surveys during 2008-09 identified a number of areas with anomalous gold, arsenic and lead. Zamia has selected the Matilda and Frankfield Hill targets for initial drill testing.

Matilda is a new target which has not previously been subjected to drilling. At Frankfield Hill, previous (1980s) drilling along a fault zone intersected elevated gold concentrations. Zamia's soil geochemical survey identified a new anomaly which was not tested in previous drilling. The initial programme is up to 10 reverse circulation (RC) holes to 120m depth.

Further details on Zamia's gold targets can be found in the Company's Annual Report and in the AGM presentation.

A handwritten signature in black ink, appearing to read 'K. Maiden', with a large loop at the end of the signature.
